Session Evaluations Contest

- Download and open OLC Conferences mobile app
- Navigate to specific session to evaluate
- Click “Evaluate Session” at the bottom of session details screen
- Complete session evaluation*

Each session evaluation completed (limited to one per session) = one contest entry

**Five (5) $25 gift cards** will be awarded to five (5) individuals
Must submit evals using the OLC Conferences mobile app or website

Aroma Chemistry

THE SMELL OF WET DOG

THE SOURCE OF DOG HAIR COMPOUNDS

Wet dog smell comes from microorganisms living in dog hair. They produce two-mol volatile organic compounds. Adding water helps these compounds break free from the hair as the water evaporates, decreasing their concentration in the air.

COMPONDS WITH INCREASED CONCENTRATIONS IN WET DOG HAIR

The smell of dogs is complex; multiple chemical compounds contribute which individually do not have odors associated with dog smell, but present in combination. A pet study has identified concentrations of some compounds increase when dog hair is wet. Those shown on the top row below showed greater increases than those on the second row.

DECREASING CONCENTRATIONS
