DESIGN MODEL - OUTCOMES

DESIGN MODEL - COURSE

DESIGN MODEL - FORMATIVE

ONLINE FORMATIVE ACTIVITY

Instructional activity with a specified form of action, where a learner is prompted to ‘do’ something within the context of instructional content.

How Do You ENGAGE?

Go to: <https://kahoot.it/>

EXAMPLES

The **condition** described within a performance objective should:

- ☒ Describe the skills necessary to perform the behavior.
- ☐ Explain how well the learner is expected to perform the desired behavior.
- ☐ Specify the cue or stimulus provided to learners or the resource materials/tools needed.
- ☐ Clearly describe what the learner is expected to do.
- ☒ **Incorrect.** The condition focuses on the specific context in which the learner will perform the behavior described in the objective.

A performance objective is a detailed description of **-Select-** when they complete a unit of instruction.

True or False: The terms behavioral objective, performance objective, and instructional objective are terms used to describe **-Select-**

-Select-

-Select-

what learners will be able to do

what learners will know

The hierarchical analysis approach... (check all that apply) 

- ☒ requires the designer to ask, "What must the student already know so that, with a minimal amount of instruction, this task can be learned?"
- ☐ is best used to analyze individual steps in the goal analysis that are classified as intellectual or verbal information.
- ☐ is the process of listing chronologically, in a step-by-step manner, all of the substeps required to perform an instructional goal.
- ☒ can be used to suggest the specific subordinate skills required to support any particular step in the goal.

Check My Answer

-  **Correct!** The hierarchical analysis approach is best used to analyze intellectual or psychomotor skills, and a procedural analysis is used when one or more of the steps in the goal analysis is found to contain an additional set of mental or physical steps.

EXAMPLES

Match the type of assessment to the correct description.

Alternate mode

Description of Assessment

This type of criterion-referenced assessment is administered to determine whether learners have previously mastered some or all of the skills to be included in the instruction. Scores from this type of assessment help designers decide whether instruction is too elementary for learners and, if it is not too elementary, how to develop instruction most efficiently for a particular group.

This type of criterion-referenced assessment is administered to enable learners to rehearse new knowledge and skills and to judge for themselves their level of understanding and skill.

This type of criterion-referenced assessment assesses all objectives, especially focusing on the terminal objective. Primarily, its purpose is to help the designer identify the areas of the instruction that are not working. It may also be used to assess learner performance and assign credit for successful completion of a program or course.

This type of criterion-referenced test assesses learners' mastery of prerequisite skills, or skills that learners must have already mastered before beginning instruction. Scores from this type of assessment help designers decide whether learners are ready to begin the instruction.

Type of Assessment

Posttest

Practice Test

Entry Skills Test

Pretest

✗ Incorrect

Catherine, an instructional designer, recently collaborated with school administrators to determine how to prepare teachers to address behavioral issues displayed by special needs students. Once Catherine determined that instruction was the best response to this need, she worked with a small team to clarify and document the goal of the instruction.

Now that Catherine has a clear instructional goal that everyone agrees on, she should begin working with a SME to draft learning objectives that support the instructional goal.

- ☒ True
- ☐ False

✗ Incorrect. Before she begins drafting learning objectives, Catherine should complete a task analysis, which will help her determine the overall scope and sequence of the instruction.

How do the performance objectives relate to the goal of instruction?

They dictate the skills a learner needs to be able to do to prove knowledge.

Submit and Compare

Explanation:

Performance objectives support the instructional goal by describing the skills required to achieve it. If learners achieve the performance objectives for each skill and subskill identified in the task analysis, then they should also be able to perform the broader instructional goal.

EXAMPLES

Read the instructional goals on the left, and select the correct learning domain for each.

	Verbal Information	Intellectual Skills	Psychomotor Skills	Attitudes
Name the parts of the body using common terminology.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Choose to behave safely while riding a motorcycle.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Perform soccer moves.	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Determine the distance between two cities on a map.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Hear the difference between two notes played on the piano.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

✓ Correct! Naming parts of the body requires the learner is to store the information in memory during the instruction and remember it for the test or when needed for some related task.

✗ Incorrect. Choosing to behave safely is an attitude, which is described as the tendency to make particular choices or decisions.

Let's say that you have taken a group of students out into the field and one of them found a fascinating fossil of a shell. You take the teaching opportunity and talk about the fossil and one of your students asks, "How old is it?" Well, let's find out!

You and your class head over to a conversation area to get on with the analysis...

THE ART OF FEEDBACK - QUESTION

What do Vermonty Python, Ethan Almond, and Cherry Garcia have in common?

- a. Comedians
- b. Valspar Paint Colors
- c. Designers
- d. Ice Cream Flavors

THE ART OF FEEDBACK - METHODS

What do Vermonty Python, Ethan Almond, and Cherry Garcia have in common?

Evaluation	Value judgement
Advice	Considerations Probing questions
Instructive	Description of the correct answer, why, and additional information/context Tangible feedback tied to the goal/objective Achieve greater learning

THE ART OF FEEDBACK - EXAMPLES

What do Vermonty Python, Ethan Almond, and Cherry Garcia have in common?

Evaluation	Incorrect
Advice	You might consider if these items are a profession or a product.
Instructive	These are three of at least 40 current varieties of Ben and Jerry's ice cream flavors. Vermonty Python and Ethan Almonds have been banished to the Flavor Graveyard, but Cherry Garcia is still a very popular flavor.

Session Evaluations & Drawing

👍 Evaluate Session

- Download and open OLC Conferences mobile app
- Navigate to specific session to evaluate
- Select “Evaluate Session” on session details screen (located under session type and track)
- Complete session evaluation*

*Each session evaluation completed (limited to one per session) = one contest entry

Five (5) \$25 gift cards will be awarded to five (5) individuals

Must submit evals using the OLC Conferences mobile app or website
